Hello.

Here is submission summary.

Track Name: Artificial Intelligence and Data Science

Paper ID: 2163

Paper Title: Evaluating the Impact of AI-Enabled CRM Systems on Customer Relationship Management

Abstract:

—Customer Relationship Management (CRM) platforms in today's business landscapes have evolved dramatically from being mere repositories of customer data to becoming intelligent decision-making systems powered by AI. Through the integration of AI within CRM systems, organizations are not only able to analyze customer-related data in a sophisticated manner but also, to a great extent, automate communication and give customers tailored experiences. This study aims to understand how AI facilitates CRM functionality, with a special focus on its role in customer engagement, operational efficiency, and business performance.

Currently, AI-enabled CRMs leverage machine learning, natural language processing (NLP), and other advanced techniques to convert data into actionable insight. With the help of these aids, companies can forecast user activities, identify potential clients with the highest conversion probability, and fine-tune their advertising strategies. In addition, the arrival of smart chatbots and self-service features has dramatically changed the face of customer care. Equipped with instant data analysis capabilities, such systems allow not only sales personnel and marketers but also other departments to make quick, data-driven decisions. Industries such as banking, pharmaceuticals, and consumer goods are looking at AI-capable CRM as their gateway to remain in the contest. In a real-world setting, it could mean leveraging sophisticated lead prioritization for higher sales or utilizing customer sentiment analysis for better journey mapping. More so, automation is shortening turnaround times and making issues resolution smoother. To conclude, these technological breakthroughs indicate that AI-assisted CRM systems are not merely tools for data handling; rather, they are instruments for building customer loyalty and establishing the basis for Index Terms—Artificial intelligence, CRM platforms, AI driven CRM, customer relationship management, analytics, machine learning, customer engagement, automation, business growth, digital transformation, information tracking.
